

The Future Never Looked Brighter For Treating Your Spider Veins!

*Now you and your doctor
can see the network of
veins under your skin.*

*Treatment can be simpler,
faster, and more complete.*

VeinViewer™
by **Luminetx**

“The first time I saw the VeinViewer in action I was astounded by what I saw. It is clear to me that the VeinViewer will be a very useful tool in my everyday phlebology practice.”

Dr. Steven E. Zimmet

President

American College of Phlebology

How Does VeinViewer™ Work?

One of Time Magazine’s “Most Amazing Inventions,” VeinViewer is the newest technology for mapping spider veins and locating the larger veins that feed them.

- A harmless, near-infrared light source images the hemoglobin in red blood cells
- The LED light source is safe – it cannot cause body heating or skin damage
- A video camera captures the images
- A computer processes the images
- And the images are projected back onto your skin – in real time!

See What You've Been Missing!

Now you and your doctor can see the network of veins under your skin. Treatment can be simpler, faster, and more complete. In some cases, you can even watch the treatment at work.

Spider vein treatment requires multiple injections of a solution that causes veins to shrink and disappear. By mapping veins with VeinViewer, your physician may actually need fewer injections to treat you. Fewer sticks mean less discomfort for you!

It's important to remember that spider veins are sometimes an early indication of an underlying disorder called venous reflux. Simply treating the

spider veins without investigating their potential cause can lead to an endless cycle of continuous treatment. Before spider veins can be effectively eliminated, your doctor may choose to perform a simple diagnostic evaluation using a noninvasive ultrasound scan.

When your doctor uses VeinViewer imaging during the treatment of your spider veins, it

- May result in fewer needle sticks, reducing discomfort and frustration
- Can help you better understand and appreciate your treatment plan
- Streamlines the treatment process like never before
- Lets you know that your doctor is using the latest technology to enhance your care and satisfaction

“With VeinViewer, patients never need to feel like human pincushions again.”

Dr. Richard A. Baum
*Harvard Medical School
Brigham & Women’s Hospital*

For more information about VeinViewer, visit the Diomed website at www.diomedinc.com.

Fact: Over 500,000
sclerotherapy procedures
were performed in the
U.S. in 2004.¹

And in nearly every case, healthcare providers had to rely on their experience, sight and touch. Now there's a technology that lets you and your doctor look inside - from the outside!

A Brighter Vision of the Big Picture

For the first time, your doctor can show you the network of veins under the skin – and you can better understand your treatment plan.

“VeinViewer not only allows physicians better visibility of veins targeted for treatment, but also provides verification of full and complete treatment. VeinViewer fulfills a basic surgical principle - if I can see it, I can do it.”

Dr. Steven Elias

*Director of the Center for Vein Disease
at Englewood Hospital and Medical Center
Englewood, New Jersey*
